OUR PROJECTS

CARITAS ALARM CLOCK ANDROID AND iOS APPS

Task:

To develop Android alarm clock application and later on upgrade the existing iOS application.

By using the app the end user supports Caritas every time when snoozing the alarms by buying credits for snoozes.

Technologies used:

Android;
iOS

Client:

Caritas; Stay Focused UG - Germany; Industry: Non Profit/Charity

Recommendation by Benjamin Gilg (Product Manager at Stay Focused UG):

"We asked Bulberra to develop the Android version of our Caritas Alarm Clock app, because they had done a great job on previous app projects where we chose them as our developers. For this project we only gave Bulberra the iOS version of the app and ask them to rebuild it on Android. They did a great job at replicating the app, delivered it on time and even suggested some improvements to the app. We can definitely recommend Bulberra and will chose them as our partner for future app projects."

OUR PROJECTS

PROTECT YOUR KID PARENTAL CONTROL SYSTEM

Task:

To develop parental control system which can guarantee kids safety online via blocking inappropriate apps and sites and putting healthy limits for online presence. The kids app can be installed on Android devices. The parents mode is used for overviewing the kids online behavior and is functional on Android, iOS and web.

Technologies used:

Android,iOS, J2EE,
Google App Engine,
jQuery, Bootstap,
Backbone, RequireJS,
Cordova,LESS,

Client:

Cooperation between:

netcos GmBH (<https://www.netcos.de/>) - Germany
and Bulbera Ltd (<http://bulbera.com/>)

Industry: Security - Parental Control

OUR PROJECTS

APP X CROSS - PLATFORM MOBILE APPLICATION

Task: To design and develop a full stack product which will connect different service providers with potential customers. The targeted service providers can set up when they are available, describe the service and pricing, configure discounts and get paid. The customers can search for service providers, book, pay and rate.

Technologies used:

iOS, Xamarin,
Java, Spring,
Spring Data,
Hibernate,
PostgreSQL

Client:

Early stage US startup

Industry: Marketplace; Service Providers

OUR PROJECTS LEEDS INTERACTIVE MAPS

Task:

To develop web mapping solution and iOS app with the same content. The aim is to identify all of the major investor, developer and occupier sites in certain area. The map highlights individual "hotspots" and provides baseline information with external link for additional information regarding each site and property.

Technologies used:

iOS, JQuery, Google API, CSS

Client:

Virtual Viewing - UK

<http://www.virtualviewing.co.uk/>

Industry: Property Development

Enterprise

OUR PROJECTS

VITA RAMA MEDICAL SOFTWARE

Task:

The task required to build a brand-new tool which had nothing in common with standard medical software on the market. Vita Rama has a unique workflow and requires specific information to be input by doctors, nutritionists, therapists and patients via personalized accounts. The new system is optimized for mobile experience and has separate modules for the patients and Vita Rama's team.

Technologies used:

HTML5; CSS, Bootstrap; jQuery; BackboneJS; UnderscoreJS; RequireJS; Java; Jersey; Spring; Spring Data; Hibernate; PostgreSQL

Client:

Health Center Vita Rama: <http://www.vitarama.eu/en/>; Industry: Healthcare

Recommendation by Lenko Slavov (Program Manager at Vita Rama): "In short, communication is very fast; they are all very responsive, helping you to understand better what you need; and their reactions for improving some technical things is also quite fast. Now we have a nicely working software, easily implemented in our team members and saving us great amount of time, working on the different health cases and problems with our patients. Thank you Bulbera! Our new tasks for new software projects are coming soon."

OUR PROJECTS MEDICAL UNIVERSITY CRM

Task:

We were approached by the Medical University in Pleven with a task to develop an ERP system containing information about patients with chronic obstructive pulmonary disease. The doctor's team wanted an electronic register which will allow tracking of all indicators for patients who need continuous oxygen treatment.

Technologies used:

PHP, MySQL, HTML5, CSS3, Bootstrap

Client:

Medical University- Pleven, Bulgaria: <http://www.mu-pleven.bg/>

Industry: Healthcare

Recommendation by Dr. Yavor Ivanov (Assoc.Prof., University Lung Diseases Clinic, Pleven): "I would like to express my satisfaction with the way Bulbera met our needs. We ordered the creation of two online registries and a website. They offered excellent service and cooperation while keeping the time frame as negotiated. The quality is remarkable and the prices are adequate to it. We enjoyed working with them."

OUR PROJECTS

PROMO FEED - SEARCH ENGINE AND CATALOGUE

Task:

We were approached by a startup company to develop a search engine and catalogue which aggregates millions of discounts from various popular retail and e-commerce stores in one place. With PromoFeed there is no need to browse through dozens of different sites and product catalogues anymore. It is like Google for discounts.

Technologies used:

Java, J2EE, PHP, HTML5, CSS3, Bootstrap, JQuery, JQuery Mobile, MySQL, Solr

Client:

Discount Finder

Industry: Retail and E-commerce

Cedar Foundation Website
Web

OUR PROJECTS

GETLOKAL CHILE WEBSITE

Task:

Bulbera was involved in the creation of the newest website for Getlokal- the one in Chile. It helps businesses and customers in Latin America connect easily. Getlokal is one of the biggest user generated review sites. It has presence all over the globe. It gives real time information on what is happening in the city, what bars to visit or where to go for a dinner.

Technologies used:

PHP, Symfony, MySQL, HTML5, CSS3

Client:

Futurist Labs and Getlokal

<https://www.getlokal.cl/>

Industry: Leisure, Entertainment, Food&Drinks

OUR PROJECTS ➤ MEDICAL PRACTICES WEBSITES

Task:

Bulbera was involved in the creation of websites for different types of medical practices. To help its clients in the Healthcare industry we have created Small, Medium and Enterprise sites which can easily be customized according to the specific requirements of the practice. As a company which is an expert in developing medical software we also provided this quick web solution to the practices we work with.

Technologies used:

WordPress

Client:

Various small, medium and large medical practices

<http://medical.bulbera.com/>

Industry: Healthcare

OUR PROJECTS

CEDRAR FOUNDATION WEBSITE

Task:

Bulbera joined forces with Cedar Foundation to upgrade their visual presence on the web starting with the website for the Bulgarian branch.

Cedar Foundation is a charity organization based in numerous countries on different continents. They work with children and orphans on various educational programs. They have won numerous awards for their charity projects.

Technologies used:

WordPress

Client:

The Cedar Foundation
